

Hager Electro recalls 'mono' range of single module RCBO (combination RCD & MCB)

As a specialist provider of top quality electrical protection devices and solutions to homes and businesses throughout Australia, Hager Electro prides itself on the quality of our products and the safety of our customers.

A potential defect has been discovered on a range of our RCBO's (Combined Safety Switch and Circuit Breaker). These products are commonly installed in electrical enclosures or meterboxes.

Whilst the fault is very rare, we have taken the voluntary decision to Recall all of these units sold and installed in Australia and New Zealand.

Our discussion with your Electrical Contractor has indicated that you may have had at least one of these products installed at your home or business.

Hager Electro have engaged your Electrical Contractor to perform the changeover at no cost to you.

Rest assured, that the potential fault is concerned purely with the unit itself and is in no way related to the installation or workmanship of your Electrical Contractor.

Please accept this correspondence as confirmation of the work that is required and our apologies for any inconvenience scheduling this replacement may cause.

The replacement will not affect your electrical installation, except to ensure that the RCBO functions are safe and effective.

Please visit www.hagerelectro.com.au/6862.htm for more information or to register the location of RECALLED RCBO/s.
